

What is Telepharmacy?

The Telepharmacy Concepts system allows one pharmacist to serve multiple locations simultaneously through a pharmacy technician. Via video teleconference, the pharmacist can interact with patients or the pharmacy technician as if they were at the same physical location.

Prescriptions are filled and approved by a Pharmacist using our telepharmacy technology from across the street or hundreds of miles away.

Urban Pharmacies

Growing pharmacies and pharmacy organizations require their stores to remain operational even when pharmacists are unavailable or on vacation. Telepharmacy Concepts from Custom Data, Inc. can set up a pharmacy network within your organization to allow any pharmacist to fill-in via teleconference from any other pharmacy in your organization.

Utilizing our telepharmacy technology will allow you to manage your organization more effectively thus improving your customer relations as well as your bottom line. Telepharmacy Concepts will help you maintain the flexibility a demanding lifestyle may require.

Rural Pharmacies

Sustaining pharmacy services in a rural community can be a challenge. With a shortage of Pharmacists across the nation, rural communities are losing prescription drug services. Patients are forced to travel to larger communities to have their prescriptions filled. In some cases, the nearest pharmacy may be fifty or even one hundred miles away.

Telepharmacy Concepts from Custom Data, Inc. will create a regional pharmacy network connecting your community with a pharmacist hundreds of miles away while keeping businesses in your local community thriving.

"Custom Data, Inc. provided me with the solutions and technologies needed to expand my hometown pharmacy into a telepharmacy network serving two additional communities."
